Question 57: Have Class Plaintiffs proved their §10(b) Claim for the following statement and accompanying slide presented at the April 9, 2018 IPAA-OGIS Conference and Presentation?

“Now, here’s one simple example of a well that we optimized with an ESP, obviously a very good outcome if you’re producing on the order of 800 barrels a day.... But the point is there are opportunities like this. We’ve got a lot of effort focused on that.”

Production Optimization

Key driver to maximize ROI, EBITDA and optimize reserves

Sustained Base Production Key to Long-Term Value

Type Curve Impact

- Current type curve based on gas lift design
- GL flowing bottom hole pressure (FBHP) ~1,000 psi
- Other artificial lift methods can lower FBHP
- Matrix rock types should respond to lower FBHP
- Expect higher EUR, rate increase, lower decline for wells

Gas Lift for Initial Well Design

- Flowback managed to 100 Bbl total fluid per hr
- Up to 50% oil EUR recovered via gas lift

Shift from Gas Lift to Fit-for-Purpose Lift

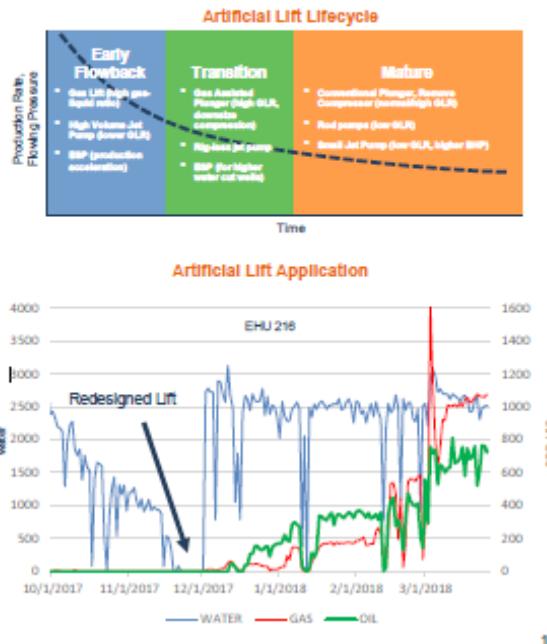

- Lower FBHP, Increased run-time
- Lower OPEX, extend economic limit, Increase NPV over time

Additional Drawdown Strategies

- Optimize gathering system pressures
- Several technologies in field trials

Key Factors

- Fit-for-purpose / well-specific solutions
- Accelerated production / maximize NPV
- CAPEX and LOE per BOE for production gains

Yes.
